Such a result is not impossible are vitims of failures. Thin people are vitims of mal-nutrition, a condition which prevents the fatty elements of food from being taken up by the blood as they normal. Instead of getting to the blood all the fat and flesh producing elements stay in the intestines until they pass from the body as wast.

To correct this condition and to produce a healthy, normal amount of fat the nutritive processes must be artificially supplied with the power which nature has denied them.
